**(PrEP Specialist) PrEP counseling, benefits, risks & baseline tests**

**(Medical Provider) Reviews labs, counseling, prescription, primary care**

# Adherence

## SPARK

2-, 6-, and 10- weeks after PrEP initiation and every visit

## PrEP Program

30 & 90 day adherence phone call/visit with PrEP specialist

## PCP initiated

90 day visits

# Training Needs

Insurance navigation (Providers, POPs)

Provider training

POP training

Consumer/community information sessions

# Social/Medical Issues

Linkage to primary care

Assessments of mental health/substance use  
& referrals as needed

Insurance navigation

# Successes

Access to PrEP is not restricted to CL patients

Workflows and templates

Diversity of client population reflects health center

Demand exceeds capacity

PrEP demonstration project (SPARK) effective in introducing providers/agency to PrEP model

Linkage to primary care

# Challenges

Reaching those at risk who are unaware of PrEP: youth, transgender clients, people of color

Multiple delivery PrEP models challenging to streamline

30 day vs. 90 day pickup of prescriptions

STI screening (asymptomatic) for uninsured/PrEP-AP six monthly (14-22% STIs at quarterly appointments)

Providing PrEP outside of primary care

Consistency vs. flexibility – not every patient needs counseling, POP visit

Quality control & tracking

# Sparking PrEP Awareness Research and Knowledge
