HIV Tobacco Cessation Campaign Update

IN THE US, HIV-INFECTED SMOKERS LOSE OVER SIX YEARS OF LIFE EXPECTANCY DUE TO SMOKING COMPARED TO HIV-INFECTED NON-SMOKERS, MORE YEARS OF LIFE LOST THAN THOSE DUE TO HIV.

Tobacco Cessation Measures

1. Screen
   1.1 Tobacco Cessation Screening
      The percent of HIV-infected patients who were screened for tobacco use.

2. Intervene
   2.1 Tobacco Cessation Counseling
      The percent of HIV-infected patients screened and identified as tobacco users who received a documented tobacco cessation counseling intervention.
   2.2 Tobacco Cessation Pharmacotherapy
      The percent of HIV-infected patients screened and identified as tobacco users for whom tobacco cessation pharmacotherapy was prescribed.

3. Quit
   3.1 Reduction in Tobacco Use
      The percent of HIV-infected patients identified as tobacco users who self-reported reduced tobacco use.
   3.2 7-Day Quit
      The percent of HIV-infected patients screened and identified as tobacco users who abstained from using tobacco for at least a consecutive 7-days during reporting period.
   3.3 30-Day Quit
      The percent of HIV-infected patients screened and identified as tobacco users who abstained from using tobacco for at least a consecutive 30-days during reporting period.
We officially have a website!
www.HIVTobaccoFreeNY.org

Currently under renovation – launching in January 2017!

What does the website have?
• Providers
  • Sign-in to database
  • Resources
• Consumers
  • Sign-in to self-report on measures
  • Resources

Welcome to the HIV Tobacco Cessation Improvement Campaign

People living with HIV who smoke tobacco are at a greater risk of AIDS-related death than HIV-infected non-smokers. The New York State Department of Health AIDS Institute HIV Tobacco Cessation Improvement Campaign is designed to improve the health and decrease the morbidity and mortality of people living with HIV in New York State. The purpose of this campaign is to promote tobacco screening and cessation counseling and pharmacotherapy in order to increase tobacco cessation in this population. With advances in HIV treatment and management, HIV smokers now lose more years of life from smoking than from the virus. Now is the time to quit.

We invite all HIV providers and consumers in New York State to join the campaign!
Provider Toolkit Resources

- Clinical Education Initiative (CEI) courses for credit
- Campaign webinars
- Smoking Cessation Leadership Center webinars
- Harm reduction approaches
- Motivational interviewing
- The 5 A’s of tobacco cessation
Coming Up...

Stay tuned for:
